HEADSUP B2B

BIOMASS (LEVEL 2)

Manufacturer ki production capacity ka kya role hota hai?

Supplier ki daily production capacity important hoti hai →

For example

- **Briquettes** – approx 100 MT per day
- **Pellets** – approx 150 MT per day

Capacity se supply consistency aur bulk order feasibility decide hoti hai

MOQ biomass mein kaise apply hota hai?

FACTS

MOQ usually 1 truckload hota hai
Logistics-driven MOQ hota hai, not piece-based

Pellets aur Briquettes ka Simple Comparison

Criteria	Pellets	Briquettes
GCV	**4,200–4,800 kcal/kg** *(higher energy output)*	**3,800–4,500 kcal/kg** *(moderate energy)*
Ash	**0.5–6%** *(cleaner combustion)*	**2–10%** *(more residue)*
Moisture	**6–10%** *(better efficiency)*	**8–15%** *(lower efficiency)*
Size	**6–10 mm** *(uniform, easy feeding)*	**50–200+ mm** *(bulky, manual feeding)*
