HEADSUP B2B

BIOMASS (LEVEL 3)

Biomass procurement ke time sabse pehle kya validate karte hain?

- Sabse pehle **technical feasibility check hoti hai**
- **Boiler / furnace type ke hisaab se fuel selection** hota hai
- Required **GCV range aur acceptable ash content** define kiya jata hai
- **Moisture level, monthly consumption aur site storage capacity** assess hoti hai

Galat fuel selection se boiler efficiency aur maintenance dono negatively impact hote hain

Raw material aur seasonality ka supply pe kya impact hota hai?

Biomass agro-residue pe based hota hai, isliye supply season-driven hoti hai:

Paddy straw / paddy husk
Winters mein zyada available

Groundnut shells
Summers mein zyada available

Mustard Residues
region specific availability

Season ke time availability smooth hoti hai, **off-season mein price aur supply fluctuate kar sakti hai**
