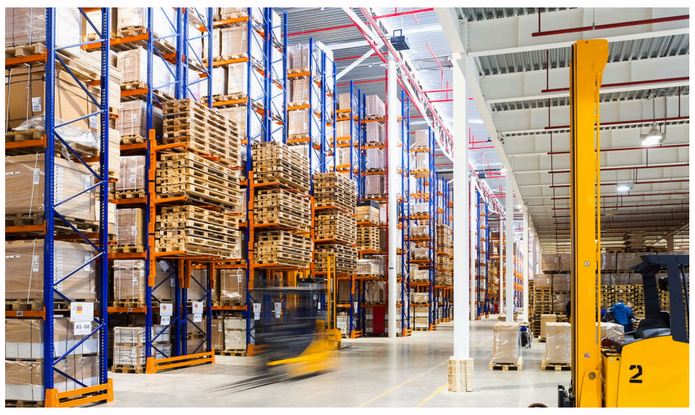
HEADSUP B2B

INDUSTRIAL AUTOMATION (LEVEL 1)

Use kahan hota hai?



Warehouses and logistic centres

Cold Storage Units

Commercial and Industrial areas

Malls, Colleges, Tourist Spots

Kaunse Products?

Hi Speed Doors

Motorised Gates

Dock Leveller

Boom Barriers

Turnstiles

Rolling Shutters

Purpose Kya Hai?

- Goods ka smooth aur bina ruke movement
- Saman ki fast loading aur unloading
- Access control karta hai, toh safety zaada milti hai
- Kam manual efforts aur errors ke chance

Brand Kaunsa?

RUDHAR®

ASSA ABLOY

HEADSUP B2B

INDUSTRIAL AUTOMATION (LEVEL 2)

Pricing aur **Quotation** Samajhne Ke Liye Zaroori Basics

Automation solution ka price kis-kis factor pe depend karta hai?

- Material type and thickness (metal zyada ya heavy duty ho to cost badhti hai)
- Size and dimensions (bada size = zyada material = higher cost)
- Standard vs non-standard requirement (client-specific customisation price badha deti hai)
- Automation level (manual, semi-automatic, fully motorised)
- Safety and compliance requirements

Conveyor ka quotation length ke alawa aur kin cheezon se change hota hai?

Conveyor quotation sirf length se nahi, balki in factors se change hota hai :

- Load capacity
- Belt / roller type
- Motor and drive system
- Incline or vertical movement requirement
- Control panel and automation level
- Installation complexity
- Length impact karta hai, lekin design and usage pricing ko equally affect karte hain

Kya zaada quantity matlab kam price??

- Zyada quantity se per-unit cost thodi kam ho sakti hai
- Bulk order par limited discount mil sakta hai
- Lekin automation projects mein cost zyada tar material par depend karti hai, isliye discount ek had tak hi possible hota hai

INDUSTRIAL AUTOMATION (LEVEL 3.1)

Ab Procurement samajhte hain!

Procurement kaise hota hai?

OEMs ke through he procurement hoti hai.

- Raw material se product manufactured hote hain
- Installation, commissioning aur after-sales support provide karte hain
- Industry quality aur safety standards follow karte hain

Isse execution aur long-term maintenance risk kaafi kam ho jata hai

Procurement start karte time kya check hota hai?

- Client ki exact need. Product, usage aur automation level
- Right OEM selection. Kyunki har product har vendor ke paas nahi hota
- Budget, brand preference aur vendor options ka alignment

Local product ka risk client ko kaise samjhate hain?

- **Quality** ke liye sure nhi ho skte hai aur safety standards follow nahi hote
- **After-sales support** aur **warranty ownership** clear nahi hoti
- Short-term mein sasta lagta hai, lekin **long-term maintenance** aur breakdown **cost zyada hoti hai**

Site ready hai ya nhi? Timelines ki fikar? Yeh zaruri hai

- **Site ki taiyaari delivery aur installation par seedha asar karti hai.** Height-width clear na ho, back run space ya floor ready na ho toh delay, rework aur safety issue aate hain
- Manufacturing ka time product ke hisaab se badalta hai. Jaise **rolling shutters ~7–10 din, dock levellers ~4 din**
- Installation ka plan **manufacturing complete hone, site readiness aur logistics ke saath jod kar banta hai.** Isliye automation mein har product ke liye fixed TAT possible nahi hota

HEADSUP B2B

INDUSTRIAL AUTOMATION (LEVEL 3.2)

Ab business aur client ko samajhte hain!

Client ko ROI kaise Samjhaayein?

- Automation se manual lifting khatam hoti hai aur material movement tez ho jata hai
- Time bachta hai, manpower par depend kam hota hai, aur safety ke saath efficiency badhti hai
- Dhyaan hamesha long-term operational bachat par hota hai, sirf shuruati cost par nahi

Installation approvals aur right inputs kyun zaroori hote hain?

- Installation se pehle site aur safety approvals mandatory hote hain. Safety kit, ID access aur compliance clear na ho toh kaam der se ya site access deny hoga
- Solution propose karne se pehle client se clear opening size, usage requirement aur site environment samajhna zaroori hota hai
- Site visit ke bina correct automation solution recommend karna risky hota hai

Certification aur compliance kyun important hote hain?

- Certified products (ISO 9001, ISO 14001, ISO 45001, CE, RoHS)
- Ensure safety, quality consistency, and statutory compliance
- Help clients meet audit, tender, and factory compliance requirements
- Reduce long-term legal, safety, and operational risk

ISO 9001:2015

Installation aur after-sales support ka client satisfaction pe kya impact hota hai?

- Sahi installation aur strong after-sales support se client ka experience better hota hai aur repeat business ke chances badhte hain
- Local solution mein quality aur AMC issues aate hain. Branded solution ke saath clarity, reliability aur timely delivery milti hai
- Strong execution aur support se long-term trust banta hai, jo references aur future deals mein convert hota hai
